Job Title: Senior Frontend Developer
Department: User Experience Engineering
Location: San Francisco, CA / Remote

About the Role:
We are seeking a Senior Frontend Developer to lead UI engineering for our modern web applications.

Responsibilities:
- Build modular, reusable, and accessible web components.
- Optimize web bundle sizes, Core Web Vitals, and runtime rendering performance.
- Partner with product design to translate Figma specs into clean, responsive interfaces.

Must-Have Requirements:
- Minimum 3+ years of professional web application engineering with JavaScript (or JS / modern ECMAScript).
- Minimum 3+ years of hands-on experience building single-page applications with React.
- Strong proficiency in TypeScript for type-safe frontend architecture.
- Minimum 3.0 years of frontend web development experience.
- Bachelor's degree in Computer Science or Software Engineering.

Nice-to-Have Requirements:
- Experience with Tailwind CSS utility-first styling.
- Experience with Next.js App Router for server-rendered React applications.
- Experience writing unit tests with Jest or Vitest.
