Job Title: Data Scientist & Machine Learning Engineer
Department: Applied AI & Analytics
Location: Boston, MA / Remote

About the Role:
We are looking for a Data Scientist to build, evaluate, and deploy predictive models and natural language processing pipelin

Responsibilities:
- Develop supervised and unsupervised machine learning algorithms.
- Build NLP pipelines for automated document classification and entity extraction.
- Clean and query large relational and analytical datasets.

Must-Have Requirements:
- Minimum 3+ years of programming and data analysis experience in Python.
- Minimum 2+ years of hands-on deep learning model development with PyTorch.
- Strong proficiency in SQL for relational data querying and aggregation.
- Minimum 3.0 years of professional data science experience.
- Master's degree in Data Science, Computer Science, Statistics, or quantitative discipline.

Nice-to-Have Requirements:
- Applied experience with Natural Language Processing (NLP) or transformer models.
- Familiarity with Scikit-learn and MLflow experiment tracking.
- Experience containerizing models with Docker.
