Job Title: Cloud DevOps & Infrastructure Engineer
Department: Platform & Reliability Engineering
Location: Chicago, IL / Remote

About the Role:
We need a Cloud DevOps Engineer to scale our multi-region cloud infrastructure and maintain Kubernetes cluster reliability.

Responsibilities:
- Manage production container orchestration clusters on AWS EKS.
- Author modular Infrastructure as Code using Terraform.
- Automate CI/CD pipelines for zero-downtime microservice deployments.

Must-Have Requirements:
- Minimum 2+ years of production container orchestration experience with Kubernetes.
- Minimum 3+ years of containerization experience using Docker.
- Minimum 2+ years of hands-on cloud engineering experience on AWS.
- Minimum 4.0 years of general DevOps or cloud infrastructure experience.

Nice-to-Have Requirements:
- Experience with Terraform Infrastructure as Code.
- Experience building automated CI/CD pipelines (e.g. GitHub Actions, Jenkins).
- AWS Certified Solutions Architect or Certified Kubernetes Administrator (CKA).
